Full Text
ACCESSION NUMBER: 97247323 MEDLINE
DOCUMENT NUMBER: 97247323 PubMed ID: 9115911
TITLE: In vivo formation of prostaglandin E1 and prostaglandin E2 in atopic dermatitis.
AUTHOR: Leonhardt A; Krauss M; Gieler U; Schweer H; Happle R; Seyberth H W
CORPORATE SOURCE: Department of Pediatrics, University of Marburg, Germany.
SOURCE: BRITISH JOURNAL OF DERMATOLOGY, (1997 Mar) 136 (3) 337-40. Journal code: AW0; 0004041. ISSN: 0007-0963.
PUB. COUNTRY: ENGLAND: United Kingdom
Journal; Article; (JOURNAL ARTICLE)
LANGUAGE: English
FILE SEGMENT: Priority Journals
ENTRY MONTH: 199704
ENTRY DATE: Entered STN: 19970506
Last Updated on STN: 19970506
Entered Medline: 19970422

AB Immunological and biochemical alterations in atopic dermatitis have been attributed to a deficient conversion of omega-6 fatty acids (i.e. linoleic acid, gamma-linolenic acid, and dihomo-gamma-linolenic acid) to prostaglandin (PG) E1. In patients with atopic dermatitis, however, the formation of PGE1 has not been evaluated so far. We therefore measured plasma concentrations of 15-keto-**13,14-dihydro-PGE1**, which reflects endogenous PGE1 release, by gas chromatography-mass spectrometry in 31 patients with atopic dermatitis (aged 18-41 years, median 26 years) and in 31 healthy, age- and **sex**-matched control subjects. In order to exclude a metabolic shift from PGE1 to PGE2, we also measured the plasma levels of 15-keto-13,14-dihydro-PGE2. There was no difference between patients and control subjects with respect to plasma concentrations of 15-keto-**13,14-dihydro-PGE1** (3.9-49.6, median 10.3 pg/ml vs. 3.2-80.4, median 8.3 pg/ml, P = 0.22), 15-keto-13,14-dihydro-PGE2 (11.6-201.0, median 24.8 pg/ml vs. 8.6-201.0, median 19.6 pg/ml, P = 0.10), and the ratio of 15-keto-**13,14-dihydro-PGE1** to 15-keto-13,14-dihydro-PGE2 (0.17-1.39, median 0.41 vs. 0.2-1.17, median 0.45, P = 0.29). These results indicate that the endogenous formation of both PGE1 and PGE2 is normal in our patients. The results do not confirm the pivotal role that other authors have attributed to a deficient PGE1 formation in the pathogenesis of atopic dermatitis.

AB . . . with atopic dermatitis, however, the formation of PGE1 has not been evaluated so far. We therefore measured plasma concentrations of 15-keto-**13,14-dihydro-PGE1**, which reflects endogenous PGE1 release, by gas chromatography-mass spectrometry in 31 patients with atopic dermatitis (aged 18-41 years, median 26 years) and in 31 healthy, age- and **sex**-matched control subjects. AB Vasoactive compds. are described for the treatment of **erectile** dysfunction and **impotence**. The compds. are reaction products of an anionic or neg. charged vasoactive or erection-inducing component and a cationic or pos. charged vasoactive or erection-inducing component. These components are combined as acids and bases to form an org. salt or ionically bonded compd. The compds. have advantageous soly. characteristics and efficacy. A compd. of the invention is combined with a pharmaceutical vehicle to form a compn. which preferably includes an emulsifier. A local anesthetic and/or androgenic steroids may also be included. Compns. of the invention may also include more than vasoactive org. salt compd. The compn. can be advantageously formulated and administered to allow self-adjusted dosing, while minimizing or preventing overdosing. Phentolamine alprostadilate and papaverine alprostadilate, both existing as compds., not mixts., were prepd. and formulated into pharmaceutical compns.

AB Methods and pharmaceutical formulations for treating female **sexual**

dysfunction, and more particularly to vaginal and/or vulvar administration of a vasodilating agent, such as a prostaglandin, in such treatment. The novel formulations are also useful for preventing the occurrence of yeast infections, improving vaginal muscle tone and tissue health, enhancing vaginal lubrication, and minimizing excess collagen deposition. A clitoral drug delivery device is also provided.

AB A method is provided for enhancing a female individual's **sexual** desire and responsiveness. The method involves administration of a pharmaceutical formulation contg. an effective amt. of an androgenic agent, wherein administration is on an as-needed basis rather than involving chronic pharmacotherapy. Local delivery may be accomplished via administration to the vagina, vulvar area or urethra of the individual, although oral administration is preferred for those androgenic agents that are orally active. Formulations and kits for carrying out the method are provided as well. The androgenic agents can be used in combination with at least one addnl. active agent, such as a vasodilator.

TI As-needed administration of an androgenic agent to enhance female **sexual** desire and responsiveness

AB Vasoactive compds. are described for the treatment of erectile dysfunction and impotence. The compds. are reaction products of an

anionic or neg. charged vasoactive or erection-inducing component and a cationic or pos. charged vasoactive or erection-inducing component. These components are combined as acids and bases to form an org. salt or ionically bonded compd. The compds. have advantageous soly. characteristics and efficacy. A compd. of the invention is combined with a pharmaceutical vehicle to form a compn. which preferably includes an emulsifier. A local anesthetic and/or androgenic steroids may also be included. Compns. of the invention may also include more than vasoactive org. salt compd. The compn. can be advantageously formulated and administered to allow self-adjusted dosing, while minimizing or preventing overdosing. Phentolamine alprostadilate and papaverine alprostadilate, both existing as compds., not mixts., were prepd. and formulated into pharmaceutical compns.

AB Methods and pharmaceutical formulations for treating female **sexual** dysfunction, and more particularly to vaginal and/or vulvar administration of a vasodilating agent, such as a prostaglandin, in such treatment. The novel formulations are also useful for preventing the occurrence of yeast infections, improving vaginal muscle tone and tissue health, enhancing

vaginal lubrication, and minimizing excess collagen deposition. A clitoral drug delivery device is also provided.

AB A method is provided for enhancing a female individual's **sexual** desire and responsiveness. The method involves administration of a pharmaceutical formulation contg. an effective amt. of an androgenic agent, wherein administration is on an as-needed basis rather than involving chronic pharmacotherapy. Local delivery may be accomplished via administration to the vagina, vulvar area or urethra of the individual, although oral administration is preferred for those androgenic agents that are orally active. Formulations and kits for carrying out the method are provided as well. The androgenic agents can be used in combination with at least one addnl. active agent, such as a vasodilator.

PRIORITY APPLN. INFO.: US 1998-102987 A2 19980622
WO 1999-CA567 W 19990621

AB The present invention provides a method of treating sexual dysfunction in a female, including the vasculogenic symptoms of delayed vaginal engorgement, diminished vaginal lubrication, pain or discomfort with intercourse (dyspareunia), diminished vaginal sensation, diminished vaginal orgasm, diminished clitoral sensation or diminished clitoral orgasm, or of combating vaginal pain by stimulating peripheral pelvic nerve release of nitric oxide (NO). The method comprises administering to a female in need of such treatment a therapeutically effective amt. of a compd. which acts on a mid-brain pathway to increase blood flow to the ilio-hypogastric-pudendal artery bed and stimulate the release of nitric oxide (NO) from peripheral NANC nerve cells. The preferred compd. for the method of this invention is apomorphine or one of its pharmaceutically acceptable salts, esters, or prodrugs. Alternatively, the apomorphine is co-administered with an apomorphine-potentiating amt. of an androgen, preferably testosterone either prior to, or concomitantly with, the administration of the apomorphine. Exptl. data indicated that apomorphine was effective in initiating a sexual response in female rats.

WO 1999-CA567 W 19990621

AB The present invention provides a method of treating sexual dysfunction in a female, including the vasculogenic symptoms of delayed vaginal engorgement, diminished vaginal lubrication, pain or discomfort with intercourse (dyspareunia), diminished vaginal sensation, diminished vaginal orgasm, diminished clitoral sensation or diminished clitoral orgasm, or of combating vaginal pain by stimulating peripheral pelvic nerve release of nitric oxide (NO). The method comprises administering to a female in need of such treatment a therapeutically effective amt. of a compd. which acts on a mid-brain pathway to increase blood flow to the ilio-hypogastric-pudendal artery bed and stimulate the release of nitric oxide (NO) from peripheral NANC nerve cells. The preferred compd. for the method of this invention is apomorphine or one of its pharmaceutically acceptable salts, esters, or prodrugs. Alternatively, the apomorphine is co-administered with an apomorphine-potentiating amt. of an **androgen**, preferably testosterone either prior to, or concomitantly with, the administration of the apomorphine. Exptl. data indicated that apomorphine was effective in initiating a sexual response in female rats.

TI Method and compositions for the treatment or amelioration of **female sexual dysfunction**

AB During our evaluations of women with sexual dysfunction, we have seen many with low interest, arousal, and orgasmic capabilities with associated personal distress and diminished genital sensation and blood flow following sexual stimulation. Laboratory evaluation of these women has revealed normal estrogen but **androgen** values that were either below or in the lower quartile of the physiologic range. **Androgen** insufficiency and sexual dysfunction have been the working diagnoses in these women. Although many treatment options currently are available for this syndrome, there are limited data concerning safety and efficacy. The

aim of this retrospective, Institutional Review Board (IRB)--approved, single-institution study was to report on the **androgen** and questionnaire results from a series of patients who underwent **androgen** replacement therapy with dehydroepiandrosterone for treatment of **androgen** insufficiency and sexual dysfunction. This study revealed that there was a significant decrease in sexual distress, a significant increase in sexual function in the domains of desire, arousal, lubrication, satisfaction, and orgasm, and a normalization to values within the physiologic range in the following **androgens** measured: total testosterone, free or bioavAilable testosterone, DHEA, DHEA-S, and androstenedione. Side effects included increased facial hair (11%), weight gain (7%), acne (5%), temporary breast tenderness (1%), loss of head hair (1%) and skin rash (1%). Preliminary results suggest that **androgen** replacement therapy with dehydroepiandrosterone is a safe and effective treatment for **androgen** insufficiency and **female sexual dysfunction**. However, further research is needed, including prospective, multi-institution, placebo-controlled double-blind studies.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB A method is provided for enhancing a female individual's sexual desire and responsiveness. The method involves administration of a pharmaceutical formulation containing an effective amount of an **androgenic** agent, wherein administration is on an as-needed basis rather than involving chronic pharmacotherapy. Local delivery may be accomplished via administration to the vagina, vulvar area or urethra of the individual, although oral administration is preferred for those **androgenic** agents that are orally active. Formulations and kits for carrying out the method are provided as well.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

TI As-needed administration of an **androgenic** agent to enhance female sexual desire and responsiveness

AB . . . female individual's sexual desire and responsiveness. The method involves administration of a pharmaceutical formulation containing an effective amount of an **androgenic** agent, wherein administration is on an as-needed basis rather than involving chronic pharmacotherapy. Local delivery may be accomplished via administration to the vagina, vulvar area or urethra of the individual, although oral administration is preferred for those **androgenic** agents that are orally active. Formulations and kits for carrying out the method are provided as well.

SUMM . . . methods and pharmaceutical formulations for enhancing female sexual desire and responsiveness, and more particularly, relates to the use of an **androgenic** agent in such methods and formulations.

SUMM . . . deficiency, causing vaginal atrophy and dyspareunia, is a common cause of sexual dysfunction. For a discussion of other causes of **female sexual dysfunction**, see, e.g., Kaplan, The Evaluation of Sexual Disorders: Psychological and Medical Aspects (New York: Brunner-Mazel, 1983), and Kolodny et al.,. . .

SUMM [0008] Drug therapy, other than with female hormones, has been described for treating **female sexual dysfunction**. For example, U.S. Pat. No. 4,507,323 to Stern describes the use of the anxiolytic m-chloro-.alpha.-t-butylamino-propiophenone in the treatment of sexual. . .

SUMM [0014] In order to carry out the method of the invention, a selected **androgenic** agent is administered to a female individual to enhance sexual desire and responsiveness, and/or to improve tissue health of the. . .

SUMM . . . form may be any of those described herein, e.g., an oral dosage form containing a unit dosage of a selected **androgenic** agent, the unit dosage being a therapeutically effective dosage for enhancement of female sexual desire and responsiveness.

SUMM . . . agent" includes a single active agent as well as two or more different active agents in combination, reference to "an **androgenic** agent" includes a single **androgenic** agent as well as combinations of different **androgenic** agents, reference to "a carrier" includes mixtures of two or more carriers as well as a single carrier, and the. . .

SUMM . . . pharmacological, physiological effect, i.e., in this case, enhancement of female sexual desire and responsiveness. The primary active agents herein are **androgenic** agents. The terms also encompass pharmaceutically acceptable, pharmacologically active derivatives of those active agents specifically mentioned herein, including, but not. . . the terms "active agent," "pharmacologically active agent" and "drug" are used, then, or when an active agent such as an **androgenic** agent is specifically identified, it is to be understood that applicants intend to include the active agent per se as well as pharmaceutically acceptable, pharmacologically active salts, esters, amides, prodrugs, metabolites, analogs, etc. The primary active agents herein are **androgenic** agents.

SUMM . . . an extended time period. A sustained release formulation may be administered once to provide a single bolus dose of the **androgenic** agent, which is then effective for up to a day or even up to several days.

SUMM [0033] In order to carry out the method of the invention, a selected **androgenic** agent is administered on an as-needed basis to a female individual to enhance sexual desire and responsiveness; the individual may. . .

SUMM [0036] A. **Androgenic** Agents

SUMM [0037] The primary active agent herein is an **androgenic** agent. As will be discussed in further detail infra, the primary active agent may be administered alone or in conjunction with one or more secondary active agents. Suitable **androgenic** agents include, but are not limited to:

SUMM [0038] the naturally occurring **androgens** and derivatives thereof, including androsterone, androsterone acetate, androsterone propionate, androsterone benzoate, androstenediol, androstenediol-3-acetate, androstenediol-17-acetate, androstenediol-3,17-diacetate, androstenediol-17-benzoate, androstenediol-3-acetate-17-benzoate, androstenedione, ethylestrenol, oxandrolone,. . .

SUMM [0042] Those **androgenic** agents having suitable oral bioavailability may be advantageously administered orally. Orally active **androgenic** agents include, without limitation, testosterone propionate, undecanoate, and C.sub.4-C.sub.6 alkyl-substituted cycloalkylcarboxylates, as alluded to above, as well as the propionate, undecanoate, and C.sub.4-C.sub.6 alkyl-substituted cycloalkylcarboxylate esters of 4-dihydrotestosterone. Other **androgenic** agents that have oral activity, and whose oral activity can be enhanced by admixture with a lipoidal vehicle, include those. . .

SUMM [0044] Additional pharmacologically active agents may be co-administered along with the primary active agent, i.e., with the **androgenic** agent. Such additional active agents are also referred to herein as "secondary" active agents. Preferred secondary agents are vasoactive agents,. . . foregoing. Other suitable secondary agents include rho kinase inhibitors, melanocortin peptides, endothelin antagonists, growth factors and other peptidyl drugs; selective **androgen** receptor modulators (SARMs), neuropeptides, amino acids, serotonin agonists, serotonin antagonists, calcium channel blockers, potassium channel openers, potassium channel blockers, dopamine agonists, dopamine antagonists, non-**androgenic** steroid hormones, and combinations thereof.

SUMM [0053] Selective **androgen** receptor modulators (SARMs) include LGD2226 and/or LGD1331, both available from Ligand Pharmaceuticals (San Diego, Calif.). See Negro-Villar et al. (1999). . .

SUMM [0062] Non-**androgenic** steroids that may be administered as secondary active agents include progestins and estrogens. Suitable estrogens include synthetic and natural estrogens. . .

SUMM [0063] The **androgenic** agent and the additional active agent or agents may be incorporated into a single formulation, or they may be

administered separately, either simultaneously or sequentially. In a preferred embodiment, the **androgenic** agent is administered prior to administration of a vasoactive agent such as a prostaglandin, i.e., the **androgenic** agent is administered as a pretreatment. In a particularly preferred embodiment, such a method involves administration of an **androgenic** agent, e.g., via oral or topical (preferably vulvar and/or vaginal) administration, followed by topical (again, preferably vulvar and/or vaginal) administration. . .

SUMM . . . by reaction of a hydroxyl group with an esterification reagent such as an acid chloride. Esters of testosterone and other **androgenic** agents having a 17.beta.-hydroxyl group are usually formed at that hydroxyl group, i.e., are 17.beta.-esters. Esters can be reconverted to. . .

SUMM [0077] The amount of **androgenic** agent per oral dosage unit, for example a tablet or capsule, may vary significantly, for example from 1 .mu.g to. . .

SUMM [0079] With **androgenic** agents that are not orally active, the preferred mode of administration involves topical delivery to the vulvar region and/or vaginal. . .

SUMM [0091] Typically, compositions and dosage forms for vulvar and/or vaginal administration will contain the **androgenic** agent in a concentration such that an effective amount of the agent is delivered with a single application of the composition. For example, in the case of a gel, ointment or cream, the composition will contain sufficient **androgenic** agent such that an effective amount of the agent is delivered by application of about 0.1 g to 1.0 g. . . to 100 mg, preferably about 0.05 mg to 50 mg, most preferably about 1.0 mg to 25 mg, of the **androgenic** agent, the gel, ointment or cream formulation will contain the **androgenic** agent at a concentration in the range of about 1.0 .mu.g/g to 1.0 g/g, preferably 50 .mu.g/g to 500 mg/g,. . .

SUMM . . . common. Thus, pharmaceutical compositions according to the present invention that are in the form of a suppository will contain the **androgenic** agent at a concentration of about 2.0 .mu.g/g to 1.0 mg/g, preferably 100 .mu.g/g to 500 mg/g, most preferably 2.0. . .

SUMM [0101] Preferred buccal dosage forms will typically comprise a therapeutically effective amount of the selected **androgenic** agent and a bioerodible (hydrolyzable) polymeric carrier that may also serve to adhere the dosage form to the buccal mucosa.. . . active agent by fluids present in the gastrointestinal tract and/or first-pass inactivation in the liver. The "therapeutically effective amount" of **androgenic** agent in the dosage unit will of course depend on the potency of the agent and the intended dosage, which,. . . be used, so long as the desired drug release profile is not compromised, and the carrier is compatible with the **androgenic** agent to be administered and any other components of the buccal dosage unit. Generally, the polymeric carrier comprises a hydrophilic. . .

SUMM . . . ointments and pastes. The tablet, cream, ointment or paste for sublingual delivery comprises a therapeutically effective amount of the selected **androgenic** agent and one or more conventional nontoxic carriers suitable for sublingual drug administration. The sublingual dosage forms of the present. . .

SUMM . . . formulations (enemas). The suppository, cream, ointment or liquid formulation for transrectal delivery comprises a therapeutically effective amount of the selected **androgenic** agent and one or more conventional nontoxic carriers suitable for transrectal drug administration. The transrectal dosage forms of the present. . .

SUMM . . . of administration. Those of ordinary skill in the art of pharmaceutical formulation can readily deduce suitable unit doses for various **androgenic** agents, as well as suitable unit doses for other types of active agents that may be incorporated into a dosage. .

.

SUMM . . . embodiment, a packaged kit is provided that contains the pharmaceutical formulation to be administered, i.e., a pharmaceutical formulation containing an **androgenic** agent for enhancing female sexual desire and responsiveness, a container (e.g., a vial, a bottle, a pouch, an envelope, a. . .

SUMM . . . formulation as described herein. For example, the formulation may be an oral dosage form containing a unit dosage of the **androgenic** agent, or a gel or ointment contained within a tube. The kit may contain multiple formulations of different dosages of. . .

SUMM [0135] A. A kit that includes a container capable of holding 1 to 100 unit doses of the **androgenic** agent or the pharmaceutical composition containing the **androgenic** agent, and a dropper that can dispense between 1.0 .mu.g to 50 mg, preferably about 10 .mu.g to 15 mg,. . .

SUMM [0136] B. A kit that includes a container capable of holding 1 to 100 unit doses of the **androgenic** agent or the pharmaceutical composition containing the **androgenic** agent, and a spray or aerosol applicator to spray the **androgenic** agent or pharmaceutical composition, in the form of a liquid or foam, onto the vulvar region of the patient. The. . .

SUMM . . . C. A kit that includes a tube capable holding 1 to 100 unit doses of a pharmaceutical composition containing the **androgenic** agent, which is in the form of a cream or gel, and an applicator that can dispense a unit dose. . .

SUMM [0138] D. A kit that includes 1 to 100 unit doses of the **androgenic** agent in the form of pellets, a film or suppositories, each individually wrapped in foil or plastic and sealed to. . .

DETD . . . of a unit dosage of testosterone propionate are prepared. A pharmaceutical formulation containing testosterone propionate is prepared by mixing the **androgen** with polyethylene glycol, molecular weight (M.sub.w) approximately 4000, and heating the mixture to a temperature just high enough to produce a prostaglandin-polymer melt. The **androgen**-glycol mixture can then be poured into a mold suitable to provide a suppository, and allowed to cool. The suppository so provided is a unit dosage form suitable for transurethral administration. If desired, the **androgen**-glycol mixture may be allowed to cool on the tip of a rod adapted to be inserted into the urethra.

DETD . . . formulation is applied topically to the clitoris and within the vulvar region to provide a dose of about 1 mg **androgenic** agent, and changes in blood flow or vaginal fluid production four hours after application of the formulations are determined using. . .

CLM What is claimed is:

. . . enhancing sexual desire and responsiveness in a female individual, comprising administering to the individual a therapeutically effective amount of an **androgenic** agent on an as-needed basis without regular dosing within the context of a chronic dosage regimen.

2. The method of claim 1, wherein the **androgenic** agent is contained within a pharmaceutical formulation.

. . . 3. The method of claim 2, wherein the pharmaceutical formulation is comprised of an immediate release dosage form, and the **androgenic** agent is administered about 0.25 to 72 hours prior to anticipated sexual activity.

4. The method of claim 3, wherein the **androgenic** agent is administered about 0.5 to 48 hours prior to anticipated sexual activity.

5. The method of claim 4, wherein the **androgenic** agent is administered about 1 to 24 hours prior to anticipated sexual activity.

6. The method of claim 5, wherein the **androgenic** agent is administered about 1 to 12 hours prior to anticipated sexual activity.

7. The method of claim 6, wherein the **androgenic** agent is administered about 1 to 4 hours prior to anticipated sexual activity.

9. The method of claim 8, wherein following administration, the sustained release dosage form provides release of the **androgenic** agent over a drug delivery period in the range of about 4 to 72 hours.

12. The method of claim 2 wherein the **androgenic** agent is selected from the group consisting of androsterone, androstenediol, androstenedione, ethylestrenol, oxandrolone, nandrolone, stanozolol, dromostanolone, testosterone, dehydroepiandrosterone, 4-dihydrotestosterone, methyl. . .
13. The method of claim 12, wherein the **androgenic** agent is selected from the group consisting of testosterone, 4-dihydrotestosterone, and pharmacologically active esters thereof.

14. The method of claim 13, wherein the **androgenic** agent is selected from the group consisting of testosterone and pharmacologically active esters thereof.

15. The method of claim 14, wherein the **androgenic** agent is testosterone.

16. The method of claim 14, wherein the **androgenic** agent is a pharmacologically active testosterone ester.

19. The method of claim 12, wherein the **androgenic** agent is dehydroepiandrosterone.

32. The method of claim 31, wherein the at least one additional active agent is administered with the **androgenic** agent.

. . . The method of claim 31, wherein the at least one additional active agent is administered prior to administration of the **androgenic** agent.

. . . 34. The method of claim 31, wherein the at least one additional active agent is administered after administration of the **androgenic** agent.

. . . selected from the group consisting of rho kinase inhibitors, melanocortin peptides, endothelin antagonists, growth factors and other peptidyl drugs; selective **androgen** receptor modulators (SARMs), neuropeptides, amino acids, serotonin agonists, serotonin antagonists, calcium channel blockers, potassium channel openers, potassium channel blockers, dopamine agonists, dopamine antagonists, non-**androgenic** steroids, and combinations thereof.

. . . administering to the individual, approximately 0.25 to 72 hours prior to anticipated sexual activity, a therapeutically effective amount of an **androgenic** agent, followed by administration, approximately 0.25 to 24 hours prior to anticipated sexual activity, of a therapeutically effective amount of. . .
. . . of the female genitalia, comprising administering to a female individual, on an as-needed basis, a therapeutically effective amount of

an **androgenic** agent.

. . . for preventing vaginal atrophy, comprising administering to a female individual, on an as-needed basis, a therapeutically effective amount of an **androgenic** agent.

. . . vaginal pain during sexual intercourse, comprising administering to a female individual suffering from dyspareunia a therapeutically effective amount of an **androgenic** agent, on an as-needed basis.

. . . itching and dryness, comprising administering to a female individual in need of such treatment a therapeutically effective amount of an **androgenic** agent, on an as-needed basis.

54. A method for enhancing sexual desire and responsiveness in a female individual, comprising administering an **androgenic** agent to the individual in an amount effective to provide a blood level of the agent or a metabolite thereof. . .

55. A pharmaceutical formulation for enhancing female sexual desire and responsiveness, comprising (a) approximately 1.0 .mu.g to 500 mg **androgenic** agent per gram of formulation, (b) a pharmaceutically acceptable carrier suitable for vaginal and/or vulvar administration and selected to provide immediate release of the **androgenic** agent from the formulation following application to the individual's vagina and/or vulvar area, such that the formulation may be effectively. . .

56. The formulation of claim 58 wherein the **androgenic** agent is selected from the group consisting of androsterone, androstenediol, androstenedione, ethylestrenol, oxandrolone, nandrolone phenpropionate, nandrolone, stanozolol, dromostanolone, testosterone, dehydroepiandrosterone,. . .

57. The formulation of claim 56, wherein the **androgenic** agent is selected from the group consisting of testosterone, 4-dihydrotestosterone, and pharmacologically active esters thereof.

58. The formulation of claim 57, wherein the **androgenic** agent is selected from the group consisting of testosterone and pharmacologically active esters thereof.

59. The formulation of claim 58, wherein the **androgenic** agent is testosterone.

60. The formulation of claim 58, wherein the **androgenic** agent is a pharmacologically active testosterone ester.

61. The formulation of claim 58, containing approximately 1.0 .mu.g to 150 mg **androgenic** agent per gram of formulation.

. . . packaged kit for a female individual to use in enhancing sexual desire and responsiveness, comprising: a pharmaceutical formulation of an **androgenic** agent; a container housing the pharmaceutical formulation during storage and prior to administration; and instructions for carrying out drug administration. . .

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB A buccal dosage unit is provided for administering a combination of steroidal active agents to a female individual. The novel buccal drug delivery systems may be used in female hormone replacement therapy, in female contraception, to treat **female sexual dysfunction**, and to treat or prevent a variety of conditions and disorders which are responsive to the active agents discussed herein. The buccal dosage unit comprises a progestin, an estrogen and optionally an **androgenic** agent, as well as a polymeric carrier that bioerodes and provides for delivery of the active agents throughout a predetermined drug delivery period.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB . . . individual. The novel buccal drug delivery systems may be used in female hormone replacement therapy, in female contraception, to treat **female sexual dysfunction**, and to treat or prevent a variety of conditions and disorders which are responsive to the active agents discussed herein. The buccal dosage unit comprises a progestin, an estrogen and optionally an **androgenic** agent, as well as a polymeric carrier that bioerodes and provides for delivery of the active agents throughout a predetermined. . .

SUMM . . . and method for administering a combination of steroidal active agents, e.g., for female hormone replacement therapy, female contraception, treatment of **female sexual dysfunction**, and the like.

SUMM **Androgens** are the hormones that cause most of the masculinizing changes that occur in males during puberty. Harrison's Principles of Internal Medicine, 12.sup.th Edition (New York, N.Y.: McGraw Hill, Inc., 1991). However, low levels of **androgens** are also present in normal females. Testosterone and other **androgens** are secreted by the ovary and the adrenal cortex. See, e.g., Goodman & Gilman's The Pharmacological Basis of Therapeutics, 9.sup.th. . . nanogram/deciliter (ng/dl). As with estrogen, testosterone levels peak at the preovulatory and luteal phases of the cycle. At menopause, plasma **androgen** and estrogen levels are reduced but not completely absent in women. Alteration in the hormone profile is believed to be. . .

SUMM . . . of smaller doses of active agents (and thus avoids the side effects associated with conventional formulations). In addition, when an **androgenic** agent is included, as in the preferred embodiment herein, essentially complete hormone replacement is provided. That is, with respect to. . . therapies do not in fact provide "replacement" of the complete hormone profile of the premenopausal woman, because, as discussed above, **androgens** are also present in premenopausal women. In a preferred embodiment, then, the present invention calls for one or more **androgenic** agents to be administered along with a

progestin and an estrogen.

SUMM . . . for which the disclosed hormone combination is useful. For example, the novel drug dosage units can be used to treat **female sexual dysfunction**, to effect female contraception, to improve vaginal muscle tone and tissue health, and to enhance vaginal lubrication.

SUMM Drug therapy for treating **female sexual dysfunction** has been described. For example, U.S. Pat. No. 4,507,323 to Stern describes the use of the anxiolytic m-chloro-.alpha.-t-butylamino-propiophenone in the. . .

SUMM . . . U.S. Pat. No. 4,755,386 to Hsiao et al. generally describes the buccal administration of various medicaments, including estrogens, progestins and **androgens**; combinations of the medicaments, however, are not contemplated. Furthermore, the buccal tablets of Hsiao et al., weighing on the order. . .

SUMM . . . however, new and completely unsuggested by the art. Applicants' invention is premised on the discovery that steroidal agents, particularly an **androgenic** agent in combination with an estrogen and a progestin, can be buccally administered to provide for a highly effective method. . . female hormone replacement therapy. The buccal dosage units provided herein can also be used for other purposes, e.g., treatment of **female sexual dysfunction**, female contraception, improvement of vaginal muscle tone and tissue health, enhancement of vaginal lubrication, and the like.

SUMM . . . to a female individual a pharmaceutical composition comprising an estrogenic agent and a progestin, optionally in further combination with an **androgenic** agent.

SUMM It is still a further object of the invention to treat **female sexual dysfunction** by buccally administering a combination of active agents as described herein to a woman in need of such treatment.

SUMM . . . pharmaceutical composition is provided in the form of a simple, compact buccal dosage unit comprising therapeutically effective amounts of an **androgenic** agent, a progestin and an estrogen, or therapeutically effective amounts of an estrogen and a progestin, in a bioerodible polymeric. . .

SUMM . . . to treat any disorder, condition, disease or dysfunction for which the combination of an estrogen, a progestin, and, optionally, an **androgenic** agent, be indicated. The combination of active agents may be administered, for example, to provide female hormone replacement therapy, to effect female contraception, to treat **female sexual dysfunction**, to improve vaginal muscle tone and tissue health, to enhance vaginal lubrication, and the like. The active agents are administered. . .

DETD . . . induces a desired pharmacologic and/or physiologic effect by local and/or systemic action. The active agents herein are steroid hormones, including **androgenic** agents, e.g., testosterone and derivatives, analogs, esters and salts thereof, progestins (also referred to herein and in the art as. . .

DETD By "**female sexual dysfunction**" is meant any and all types of sexual dysfunction in human females, including, but not limited to, excitement stage dysfunctions such as touch sensation impairment, loss of clitoral sensation, and vaginal dryness and concomitant dyspareunia. Other types of **female sexual dysfunction** are discussed in detail by Kaplan, The Evaluation of Sexual Disorders: Psychological and Medical Aspects (New York, N.Y.: Bruriner-Mazel, 1983),. . .

DETD . . . of symptoms and/or their underlying cause, and improvement or remediaton of damage. Thus, for example, the present method of "treating" **female sexual dysfunction**, as the term "treating" is used herein, encompasses both prevention of

female sexual dysfunction and treatment of the dysfunction in a clinically symptomatic individual.

DETD . . . unit for the administration of a combination of steroidal agents. The dosage unit comprises (a) therapeutically effective amounts of an **androgenic** agent, a progestin and an estrogen, or of a progestin and an estrogen, and (b) a bioerodible polymeric carrier as. . .

DETD . . . or radiation treatment, ovarian ablation, or premature ovarian failure. As noted elsewhere herein, the invention is also useful to treat **female sexual dysfunction**, to effect female contraception, to improve vaginal muscle tone and tissue health, and for enhancing vaginal lubrication. Each buccal dosage unit will contain an **androgenic** agent, a progestin, and an estrogen, or a progestin and an estrogen.

DETD Suitable **androgenic** agents that may be used in the formulations of the present invention include, but are not limited to: the naturally occurring **androgens** and derivatives thereof, including androsterone, androsterone acetate, androsterone propionate, androsterone benzoate, androstenediol, androstenediol-3-acetate, androstenediol-17-acetate, androstenediol-3,17-diacetate, androstenediol-17-benzoate, androstenediol-3-acetate-17-benzoate, androstenedione, dehydroepiandrosterone (DHEA;. . . testolactone, oxymetholone and fluoxymesterone. Testosterone and testosterone esters, such as testosterone enanthate, testosterone propionate and testosterone cypionate, are particularly preferred **androgenic** agents for use in conjunction with the present invention. The aforementioned testosterone esters are commercially available or may be readily. . .

DETD . . . biological properties such as penetration through the mucosal tissue. In general, when the buccal dosage units are used to administer **androgenic** agents, esters are preferred relative to salts or other derivatives. Preparation of esters involves functionalization of hydroxyl and/or carboxyl groups. . .

DETD . . . in turn, is dependent on the particular individual undergoing treatment, the specific indication, and the like. Generally, when present the **androgenic** agent represents approximately 5 wt. % to 20 wt. %, preferably 10 wt. % to 20 wt. %, of the. . .

DETD Also, one or more additional types of drugs, i.e., pharmacologically active agents other than **androgenic** agents, progestins and estrogens, may be incorporated into the present dosage units.

DETD . . . a method is provided for administering a combination of steroidal agents using the buccal dosage units described hereinabove, containing an **androgenic** agent, a progestin, and an estrogen, or a progestin and an estrogen. The method generally comprises buccally administering the combination. . . is mitigated or substantially prevented. As alluded to above, the method is also useful in other contexts, e.g., treatment of **female sexual dysfunction**, effecting female contraception, improving vaginal muscle tone and tissue health, and enhancing vaginal lubrication. The buccal dosage units and present. . .

DETD . . . replacement therapy, the woman undergoing treatment will generally be of childbearing age or older, in whom ovarian estrogen, progesterone and **androgen** production has been interrupted either because of natural menopause, surgical procedures, radiation, chemical ovarian ablation or extirpation, or premature ovarian. . . Preferred dosage units for hormone replacement therapy are capable of delivering about 0.1 to about 2.5 mg of the selected **androgenic** agent, preferably testosterone or a testosterone ester, e.g., testosterone enanthate, cypionate or propionate, about 300 to 5000 .mu.g progestin, e.g.,. . . factors; the minimum effective dose of each active agent is of course preferred. Also, as noted above, in general, the **androgenic** agent when present represents 5 wt. % to 20 wt.

%, preferably 10 wt. % to 20 wt. %, of. . .

DETD For hormone replacement therapy, and for the other indications described herein including treatment of **female sexual dysfunction**, the buccal dosage units are preferably used consecutively so that administration of the active agents is substantially continuous. Buccal drug. . .

DETD In treating **female sexual dysfunction**, and for the other indications described herein, the dosage and administration period will, again, vary depending on the individual and. . .

DETD . . . may be administered the buccal dosage unit described in Example 1 or Example 2 every 24-hour period. Plasma levels of **androgen**, progestin and estrogen are measured using conventional methodology, both prior to treatment and at intervals after the start of treatment.. . .

CLM What is claimed is:

. . . a buccal dosage unit comprised of a compressed tablet of a bioerodible polymeric carrier and therapeutically effective amounts of an **androgenic** agent, a progestin and an estrogen; and (b) affixing the dosage unit to the buccal mucosa of the individual and. .

3. The method of claim 1, wherein the **androgenic** agent is selected from the group consisting of androsterone, androsterone acetate, androsterone propionate, androsterone benzoate, androstenediol, androstenediol-3-acetate, androstenediol-17-acetate, androstenediol-3,17-diacetate, androstenediol-17-benzoate,. . .

4. The method of claim 3, wherein the **androgenic** agent is testosterone or a pharmaceutically acceptable ester thereof.

5. The method of claim 4, wherein the **androgenic** agent is a testosterone ester.

8. The method of claim 4, wherein the **androgenic** agent is testosterone.

14. The method of claim 1, wherein the **androgenic** agent is testosterone, the progestin is progesterone, and the estrogen is 17.beta.-estradiol or ethynyl estradiol.

20. The method of claim 1, wherein the dosage unit comprises approximately 5 wt. % to 20 wt. % **androgenic** agent, 5 wt. % to 60 wt. % progestin, and 1 wt. % to 5 wt. % estrogen.

21. The method of claim 20, wherein the dosage unit comprises approximately 10 wt. % to 20 wt. % **androgenic** agent, 30 wt. % to 60 wt. % progestin, and 2 wt. % to 5 wt. % estrogen.

36. The method of claim 1, wherein the dosage unit comprises approximately 5 wt. % to 20 wt. % **androgenic** agent, 5 wt. % to 60 wt. % progestin, and 1 wt. % to 5 wt. % estrogen.

37. The method of claim 36, wherein the dosage unit comprises approximately 10 wt. % to 20 wt. % **androgenic** agent, 30 wt. % to 60 wt. % progestin, and 2 wt. % to 5 wt. % estrogen.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB Methods and formulations for treating **female sexual dysfunction** are provided. A pharmaceutical composition formulated so as to contain a selected vasoactive agent is administered to the vagina, vulvar area or urethra of the individual undergoing treatment. Suitable vasoactive agents are vasodilators, including naturally occurring prostaglandins, synthetic prostaglandin derivatives, endothelial-derived relaxation factors, vasoactive intestinal polypeptide agonists smooth muscle relaxants leukotriene inhibitors, and other. The formulations are also useful for preventing the occurrence of yeast infections, improving vaginal muscle tone and tissue health, enhancing vaginal lubrication, and minimizing excess collagen deposition. A clitoral drug delivery device is also provided.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

TI Co-administration of a prostaglandin and an **androgenic** agent in the treatment of **female sexual dysfunction**

AB Methods and formulations for treating **female sexual dysfunction** are provided. A pharmaceutical composition formulated so as to contain a selected vasoactive agent is administered to the vagina, vulvar. . .

SUMM [0002] This invention relates generally to methods and pharmaceutical formulations for treating **female sexual dysfunction**, and more particularly relates to vaginal, vulvar and/or urethral administration of a vasoactive agent, such as a prostaglandin, in such. . .

SUMM . . . deficiency, causing vaginal atrophy and dyspareunia, is a common cause of sexual dysfunction. For a discussion of other causes of **female sexual dysfunction**, see, e.g., Kaplan, The Evaluation of Sexual Disorders: Psychological and Medical Aspects (New York: Brunner-Mazel, 1983), and Kolodny et al.,. . .

SUMM . . . and endometrial cancer encountered with unopposed estrogen therapies, estrogen/progestogen combinations have been employed.

However, progestogens are known to have some **androgenic** activity. Further, common side effects from such therapies include uterine bleeding and the continuation of menstrual periods. Accordingly, there remains a need in the art to provide safer and more ways of treating **female sexual dysfunction**.

SUMM [0010] Drug therapy for treating **female sexual dysfunction** has been described. For example, U.S. Pat. No. 4,507,323 to Stern describes the use of the anxiolytic m-chloro-.alpha.-t-butylamino-propiophenone in the. . .

SUMM . . . these patents focus on the use of prostaglandins in contraceptives, labor and delivery, and do not pertain to treatment of **female sexual dysfunction**.

SUMM [0026] There are, accordingly, a number of background references relating to treatment of **female sexual dysfunction**, cervical or uterine administration of prostaglandins, and urethral drug administration in men. However, the present method for treating **female sexual dysfunction**, by way of vaginal, vulvar and/or urethral delivery of a vasoactive agent such as a prostaglandin, is completely novel and. . .

DETD [0061] Additionally, particularly for vulvar administration, it may be desirable to include an **androgenic** agent in the formulation. Suitable **androgenic** agents include, but are not limited to: the naturally occurring **androgens** and derivatives thereof, including androsterone, androsterone acetate, androsterone propionate, androsterone benzoate, androstenediol, androstenediol-3-acetate, androstenediol-17-acetate, androstenediol-3,17-diacetate, androstenediol-17-benzoate, androstenediol-3-acetate-17-benzoate, androstenedione, ethylestrenol, oxandrolone,. . .

CLM What is claimed is:

42. The method of claim 37, wherein the method further comprises co-administering an **androgenic** agent to the vulvar area of the individual in combination with vaginal administration of the vasoactive agent.

43. The method of claim 42, wherein the **androgenic** agent is testosterone or a testosterone ester.

. . . pharmaceutical formulation for treating sexual dysfunction in a female individual, comprising an amount of a vasoactive agent effective to treat **female sexual dysfunction**, wherein the vasoactive agent is selected from the group consisting of naturally occurring prostaglandins, synthetic prostaglandin derivatives, endothelial-derived relaxation factors,. . .

AB A buccal dosage unit is provided for administering a combination of steroidal active agents to a female individual. The novel buccal drug delivery systems may be used in female hormone replacement therapy, in female contraception, to treat **female sexual dysfunction**, and to treat or prevent a variety of conditions and disorders which are responsive to the active agents discussed herein. The buccal dosage unit comprises a progestin, an estrogen and optionally an **androgenic** agent, as well as a polymeric carrier that bioerodes and provides for delivery of the active agents throughout a predetd. drug delivery period. A buccal tablet contained testosterone 15, estradiol 3, progesterone 47, polyethylene oxide 24.8, Carbopol 10, and magnesium stearate 0.2%.
